

Nipuna LMS: Content Data Request

Oct 1, 2026 · @manoj

Purpose

We need four things for each course: its curriculum (modules and topics), learning materials, question bank, and assignment and test templates. With these in the Nipuna LMS, batches can start. A student enrolled in a course with no curriculum stays in **Curriculum Mapping Pending**. They cannot see sessions, materials or progress.

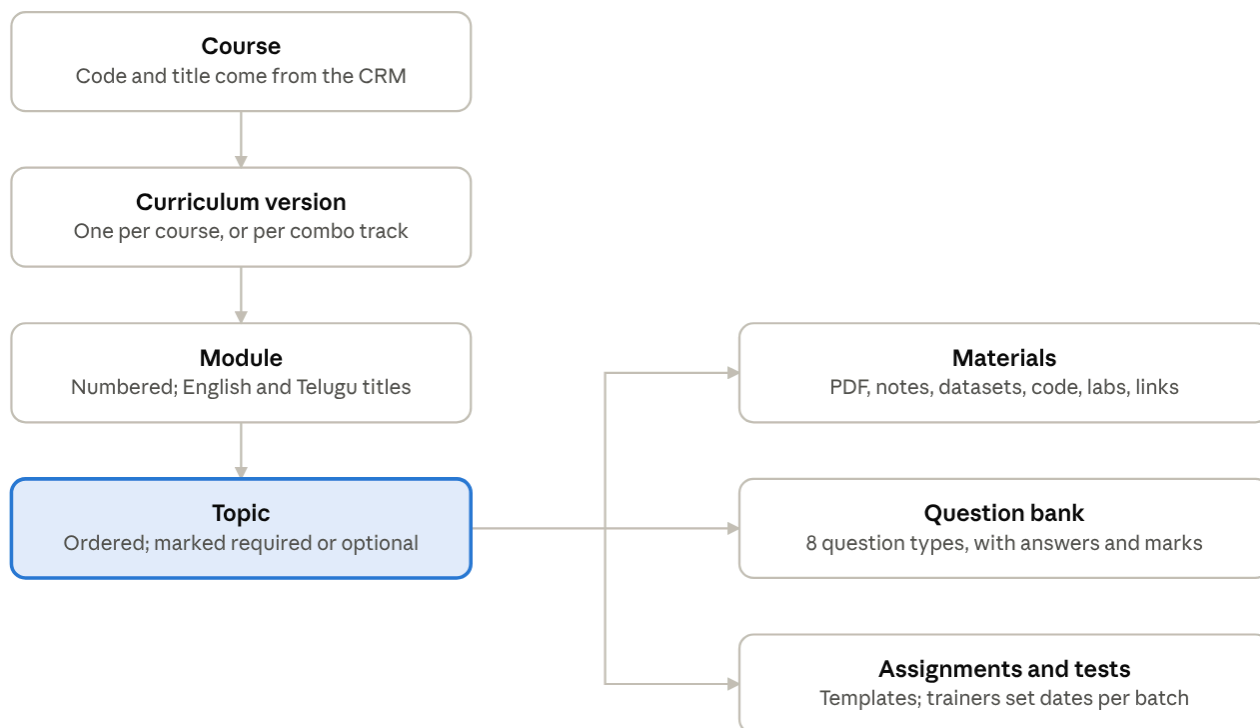

The courses below come from the CRM catalog. The CRM owns course codes and titles, so please use these codes exactly as written.

Course code	Course title	Category
NIT-CRS-007	AWS with DevOps	Cloud & DevOps
NIT-CRS-018	Data Science with Python, SQL, Machine Learning & Applied AI	Data & Analytics
NIT-CRS-019	Microsoft Power BI Data Analytics & Business Intelligence	Data & Analytics
NIT-CRS-025	Professional Graphic Design with AI Tools	Design & Media
NIT-CRS-026	Professional Video Editing with AI Tools	Design & Media
NIT-CRS-028	Complete Digital Marketing	Digital Marketing
NIT-CRS-047	Java Full Stack Developer	Software Development
NIT-CRS-052	Python Full Stack Developer	Software Development

How the LMS organises content

A course has a curriculum version, which is split into numbered modules and then numbered topics. Each material, question and assessment links to a topic, so the module and topic numbers in your workbook must match the curriculum sheet.

Materials, questions and assessments attach to a topic

content hierarchy · course to topic

If an item covers a whole module, it can link to the module and leave the topic blank. Content goes through review before students see it, so send drafts early.

Data we need

Each table below becomes one sheet in the workbook. Rows link to each other by course code, module number and topic number, so keep those consistent across sheets.

1. Curriculum sheet: one row per topic

Column	Required	What to enter	Example
Course code	Yes	Code from the Purpose table	NIT-CRS-052
Version label	Yes	Name of this curriculum version	CV 2026.1

Column	Required	What to enter	Example
Module no.	Yes	Order of the module in the course: 1, 2, 3...	1
Module title	Yes	English, up to 200 characters	Python Foundations
Module title (Telugu)	Optional	Telugu name shown to students who choose తెలుగు	పైథాన్ ఫౌండేషన్స్
Topic no.	Yes	Order of the topic within its module	2
Topic title	Yes	English, up to 200 characters	Functions & Modules
Topic title (Telugu)	Optional	Telugu name of the topic	
Required topic	Yes	Yes if every student must complete it; No if optional	Yes

2. Materials sheet: one row per file or link

Column	Required	What to enter	Example
Course code, Module no., Topic no.	Yes (topic optional)	Where the material belongs. Leave the topic blank if it covers the whole module	NIT-CRS-052, 1, 2
Title	Yes	Up to 200 characters	Functions cheat sheet
Description	Optional	One or two lines for students	Syntax and examples for def, return, *args
Type	Yes	One of: PDF, Notes, Dataset, Code, Lab, Practice material, Link, Video link	PDF
Language	Yes	en or te	en
File name or URL	Yes	The file's name in the shared folder, or the full link for Link / Video link	NIT-CRS-052_M01_T02_functions-cheatsheet.pdf

Column	Required	What to enter	Example
Download allowed	Yes	Yes, or No if students may only view it in the browser	Yes
Content owner	Yes	Name of the person who answers questions about this item	

3. Questions sheet: one row per question

Column	Required	What to enter	Example
Course code, Topic no.	Yes	Where the question belongs	NIT-CRS-052, M1 T2
Question type	Yes	One of: Single choice, Multiple choice, True / False, Numeric, Short answer, Descriptive, Coding, Output prediction	Single choice
Question	Yes	The question text, with any code in a fenced block	What does <code>len([1, 2, 3])</code> return?
Options	For choice types	Each option on its own line, labelled A, B, C, D	A) 2 B) 3 C) 4
Correct answer	Yes	Option letter(s), the value, or a model answer or rubric for descriptive and coding questions	B
Explanation	Recommended	Why the answer is right. Students see it after results are published	len counts the items
Marks	Yes	Default 1	1
Difficulty	Yes	Easy, Medium or Hard	Easy
Tags	Optional	Comma-separated keywords	lists, built-ins

4. Assignments sheet: one row per assignment template

Trainers set release and due dates for each batch, so we need only the template.

Column	Required	What to enter
Course code, Module no., Topic no.	Yes	Where it belongs
Title	Yes	Up to 200 characters
Kind	Yes	Class assignment, Module assignment, Practical lab, Mini project or Final project
Brief	Yes	The full task, with deliverables and how it is assessed
Attachments	Optional	File names of starter files, listed on the Materials sheet too
Max marks	Yes	For example 20
Required	Yes	Yes or No
AI use rule	Yes	Allowed with disclosure, Limited to specified uses, or Not permitted

5. Tests sheet: one row per test

Column	Required	What to enter
Course code, Module no., Topic no.	Yes (topic optional)	Where it belongs
Title	Yes	Up to 200 characters
Kind	Yes	Practice quiz, Module test, Coding exercise, Mock test, Mock interview or Final test
Instructions	Optional	What students read before they start
Duration (minutes)	Yes	For example 30
Attempts allowed	Yes	For example 1
Pass marks	Yes	For example 12
Required	Yes	Yes or No

Column	Required	What to enter
AI use rule	Yes	Default: Not permitted
Questions	Yes	Row numbers from the Questions sheet, or a rule such as "10 Easy + 5 Medium from Module 1"

File formats and delivery

Please send one Excel workbook for each course with the five sheets above. Put the files in a shared Google Drive folder named after the course code. The LMS rejects files that break the rules below, so checking them first saves a round trip.

Rule	Detail
Workbook name	<course code>_content.xlsx , e.g. NIT-CRS-052_content.xlsx
File name	<course code>_M<module no.>_T<topic no.>_<short-title>.<ext> , e.g. NIT-CRS-052_M01_T02_functions-cheatsheet.pdf
Documents	pdf, doc, docx, ppt, pptx, xls, xlsx, txt, md, png, jpg, jpeg, gif
Code	py, ipynb, sql, java, js, ts, json, sh, html, css, yml, yaml
Datasets	csv, tsv, parquet, xlsx
Archives	zip only. No executables or scripts inside (exe, bat, sh, jar and similar) and no zips inside zips
Size limit	50 MB per document or code file; 250 MB per dataset or zip
Videos	Do not upload videos. Share them as links with type Video link, and make sure students can open the link
Links	Full URLs that open without asking students for a special login
PDFs	Prefer PDF for notes and slides: students can view it in the browser

Class recordings are not part of this request. They come from Google Drive automatically after each session.

Next steps and open questions

Start with one course as a pilot. We'll load it, show you how it looks to students, and fix the template before you fill in the other seven.

- ☐ Content team: name one owner for each course
- ☐ Content team: send the pilot course workbook and files
- ☐ LMS team: load the pilot and share a student-view walkthrough
- ☐ Content team: send the remaining courses

Please answer these questions in your reply:

1. Which course should be the pilot? We suggest NIT-CRS-052 Python Full Stack Developer.
2. What delivery date works for the pilot and for the full set?
3. Do Telugu titles or Telugu materials exist today, or should we leave them blank for now?
4. Is any of this content already in Google Drive or another tool we can import from directly?
5. Should any course run as a combo (several tracks plus an included booster)? If so, list its tracks in order.
